Adobe Photoshop is the industry standard for image editing applications. Fortunately, you can take advantage of a trial period to avoid spending even a penny on it. Below are instructions for downloading an absolutely free version of Adobe Photoshop for your Windows or Mac computer. You get access to all the same features and tools as with the one you can purchase, with the only difference being that it will become unusable after seven days. Nusha Ashjaee / Lifewire Although the whole installation process takes a little while to complete, nearly all of it is automated, which means you have to click through just a few screens to install Photoshop. Be sure to use the trial when you'll be most apt to try out all the features. After having the Photoshop free trial for seven days, you cannot install the trial again, regardless of whether you actually used it every day during the free period. Open the Photoshop Free Trial page on Adobe's website, and select Try for free. Select the trial you want. To get just Photoshop for free, use the Start free trial button in that section. Or, you can grab some other Adobe programs during the same trial period, like InDesign and Illustrator. Enter your email address and then select Continue to log in or create a new account. This is required to get the free Photoshop trial. If you plan to pay for it after the trial, now is the time you can alter the commitment. Choose from an annual or monthly plan. Choose a payment method—credit/debit card or PayPal—and enter those details as described on the page, and then select Agree and subscribe. You aren't paying for Photoshop on this screen. As long as the "due now" price off to the right still says \$0.00, you're just getting the trial. However, as you'll learn at the bottom of this page, you'll have to cancel the trial before the seven days are up unless you want to pay for Photoshop. If you're a new user, you'll see this screen where you need to enter a password for your account. Select Set your password and follow the directions on Adobe's site to make your new Adobe account. The download should begin immediately. When it's finished, open the installer. If you don't see anything, download and install Creative Cloud manually from Adobe's website. Follow the setup file's on-screen directions to install Creative Cloud and Photoshop. This involves selecting Continue in the installer, logging in to your Adobe account in a web browser, and then choosing Start installing. Wait for several minutes as Creative Cloud installs. Once installation is finished, Creative Cloud will open and begin installing Photoshop. Photoshop should open automatically once it gets installed. If it doesn't, use the arrow next to its button in Creative Cloud to find the Open option. If you don't want to actually buy Photoshop, you'll need to cancel before the trial period is up. Follow the steps below to end your free trial of Photoshop, or you can contact Adobe for help. Open your Adobe Account page and log in using the same information you used when getting the trial. Open the My Plans area of your account through the Plans tab at the top. Select Manage plan. Choose Cancel plan on the next page and then explain why you're canceling your trial, followed by Continue. Read through what cancelling your plan means (you won't be able to access Photoshop and cloud storage space is reduced), and then select Continue. An Offers page tries to get you to stay one last time. Select No thanks. Finally, end the Photoshop trial by selecting Confirm on the final page. Plenty of free resources are available to use with this image editor. Whether you have the Photoshop free trial or the full version of the software, be sure to check out all the free add-ons you can get along with it. There are tons of free stock photo websites where you can find free images to edit in Photoshop. There are also full PSD templates available for download that include all the layers necessary to edit a project in the PSD format. If you'd rather use your own photos and just include some free textures, patterns, or shapes to spice things up, that's an option, too. Also available for free are tools necessary to do the editing, like Photoshop actions that can speed up your editing steps, and filters and plugins to add more functionality to the program. The VITAMIN D and Omega-3 Trial (VITAL) is a randomized clinical trial in 25,871 U.S. men and women investigating whether taking daily dietary supplements of vitamin D3 (2000 IU) or omega-3 fatty acids (Omacor® fish oil, 1 gram) reduces the risk of developing cancer, heart disease, and stroke in people who do not have a prior history of these illnesses. See list of participating sites Pharmacy Times, Volume 0. 0Azacitidine Doubles Survival Rates for Preleukemia Patients A study found greatly improved survival rates for patients with high-risk forms of myelodysplastic syndromes (MDS) treated with azacitidine (Vidaza). The phase 3, randomized, multicenter, international trial examined 358 patients with high-risk MDS, dividing the group in half (n = 179). One group was treated with azacitidine injections for 7 days per month, for at least 6 months, with the other half of participants receiving one of the most commonly used conventional care treatments—best supportive care, low doses of cytarabine, or classical intensive chemotherapy with an anthracycline and cytarabine. The study results showed that overall survival for patients treated with azacitidine was 9 months longer than that of patients who underwent conventional care regimens. The researchers estimated that twice as many azacitidine patients would be alive 2 years after the start of treatment, compared with those who received conventional care. Azacitidine treatment also delayed the progression of MDS to acute myeloid leukemia by 6 months. Menerba Effective for Menopausal Symptoms The results of a phase 2 clinical trial showed that Menerba (formerly MF101) is an effective treatment for menopausal vasomotor symptoms (hot flashes and night sweats). The randomized, double-blind, placebo-controlled trial involved the administration of either 1 of 2 doses of Menerba, or an identical placebo to 217 healthy, postmenopausal women experiencing severe hot flashes. The study took place at 6 clinical sites nationwide and lasted for 12 weeks. At the end of the study period, the researchers found that those taking the higher dose of Menerba saw a statistically significant decrease in all hot flashes (P = .04). In addition, the higher dose participants were 2.3 times more likely to have a minimum of a 50% reduction in hot flashes after being treated for 12 weeks, compared with the placebo group (odds ratio 2.3, P = .03). Menerba also showed a reduction in awakenings during the night triggered by hot flashes or night sweats. The women receiving the higher dose of Menerba reported a 67% reduction in night sweats, a number significantly higher than that of the placebo group (P = .05). New Drug Cuts Recurrence of GI Tumors Imatinib mesylate (Gleevec) showed efficacy in reducing the rate of recurrence of KIT (CD117)-positive gastrointestinal stromal tumors (GIST), compared with placebo. A phase 3, double-blind, randomized, multicenter study included 713 GIST patients whose tumors had been surgically removed. Conducted throughout the United States and Canada, the trial compared the recurrence-free survival (RFS) of patients treated with either imatinib mesylate 400 mg daily or placebo immediately after surgery. The study results showed that 98% of those in the imatinib mesylate group maintained RFS 1 year following surgery, compared with approximately 83% of the placebo group (P
